Abstracts

An ornithopter (from Greek ornis, ornith- 'bird' and pteron 'wing') is an aircraft that flies by flapping its wings. Designers sought to imitate the flapping-wing flight of birds, bats, and insects. Though machines may differ in form, they are usually built on the same scale as flying animals. Larger, crewed ornithopters have also been built and some have been successful. Crewed ornithopters are generally either powered by engines or by the pilot.

According to our (Global Info Research) latest study, the global Ornithopter market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD 31.2 million by 2030 with a CAGR of 23.4% during review period.
