The global Oroxyllum Indicum Extract market size is expected to reach \$ 115 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

The oroxyllum indicum extract is a concentrated active ingredient obtained by extracting from the bark, seeds and other parts of the plant Pterocarya. It is rich in flavonoids (such as baicalein and pterocaryne) and polyphenols, etc. Its main functions are antioxidant, anti-inflammatory, liver protection, and it shows certain antibacterial and anti-cancer potential. It meets the demand for natural, safe and efficient plant-based functional raw materials in the food, health supplement and cosmetic industries, providing a key biological active substance basis for the development of related products. The upstream supply chain mainly includes the large-scale cultivation, harvesting and preliminary processing of Pterocarya, as well as the suppliers of solvents and equipment needed for extraction; the downstream supply chain connects manufacturers of health supplements, functional foods and medicines, and the final products, as core additives, flow to the consumer market to meet consumers' demand for natural and healthy products. In 2025, the output of oroxyllum indicum extract is approximately 1,500 tons, with an average price of about 50 US dollars per kilogram and a gross profit margin of about 40%. The single-line production capacity is 20 tons per year.
