According to our (Global Info Research) latest study, the global Orthoclase market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Orthoclase is a common mineral and a member of the Feldspar mineral group. It is an aluminosilicate mineral with the chemical composition KAlSi_3O_8 , which contains potassium (K), aluminum (Al) and silicon (Si). Orthoclase is one of the most common minerals in the earth's crust and is widely distributed in many rocks and ores.

Orthoclase has a wide range of applications in the construction and building materials industries. Due to its hardness and durability, orthoclase is commonly used in the manufacture of tiles, flooring, countertops, wall panels and other building materials. It can also be used to make decorative stone, facade materials and interior decoration, and its variety of colors offers a variety of design options for buildings. In addition, orthoclase is also an important raw material in the glass and ceramic industries. Due to its high melting point and chemical stability, orthoclase is one of the key ingredients in the manufacture of products such as ceramics, tiles, porcelain and glass. It can increase the hardness, wear resistance and high temperature resistance of the product.
