Abstracts

The global Orthokeratology (Ortho-k) Lens Material market size is expected to reach \$ 229 million by 2032, rising at a market growth of 11.1% CAGR during the forecast period (2026-2032).

Orthokeratology (Ortho-k) lenses are made from highly oxygen-permeable, rigid gas-permeable (RGP) materials designed for overnight wear to safely reshape the cornea. These advanced, firm materials, often incorporating silicone and fluorine compounds, allow significant oxygen to pass through to the eye, ensuring comfort and eye health while correcting nearsightedness and astigmatism.

In 2025, global OK lens material production reached 38.2 tons, with an average selling price of USD 2,752 per kilogram. Total installed capacity was approximately 55 tons, and the industry gross margin was about 20%–30%. The cost structure consists of approximately 60% direct materials, 33% manufacturing overhead, and 7% labor. The industry chain comprises upstream monomers such as fluorosilicone acrylates and silicone acrylates, and downstream OK lens manufacturers.

This report studies the global Orthokeratology (Ortho-k) Lens Material production, demand, key manufacturers, and key regions.
