## Abstracts

According to our (Global Info Research) latest study, the global Orthopedic Surgery VR Course market size was valued at US\$ 398 million in 2025 and is forecast to a readjusted size of US\$ 626 million by 2032 with a CAGR of 6.7% during review period.

To address the challenges of scarce physical specimens, high operational risks, limited training scenarios, and long mastery periods in traditional orthopedic surgical training, VR courses for orthopedic surgery have emerged. Since the early 21st century, when virtual reality technology gradually penetrated the field of medical education, surgical skills training models have undergone revolutionary development. Currently, VR courses for orthopedic surgery have evolved into an immersive teaching solution integrating high-precision 3D anatomical reconstruction, realistic surgical procedure simulation, real-time operational feedback, and an intelligent assessment system. They are widely used in orthopedic teaching in medical schools, standardized training for young physicians, advanced surgical procedure training, and collaborative drills for surgical teams. This significantly reduces training costs and ethical risks, enables unlimited repetitive practice, accelerates the internalization and refinement of surgical skills, and powerfully promotes the standardization and safety of orthopedic surgical teaching—a new generation of digital education products.
