Abstracts

Orthopedic Surgical Navigation System technology uses electromagnetic field with the help of handheld emitter, which can be easily mobilized around the operating field. It consists of a magnetic coil made compatible with the system along with special tracking software, which displays the 3D location of the surgical site. These systems reduce the surgery time up to 20 minutes as it avoids the need to place optical pins, which otherwise may cause a potential fracture.

SCOPE OF THE REPORT:

This report focuses on the Orthopedic Surgical Navigation Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
