An orthopedic walking boot is a medical device designed to protect and immobilize the foot, ankle, or lower leg following an injury or surgery, while still allowing limited mobility. Often used for conditions like sprains, fractures, or post-operative recovery, it supports healing by stabilizing the affected area. These boots typically feature a rigid frame, adjustable Velcro straps, a rocker sole for easier walking, and sometimes air bladders for customized compression. Unlike traditional casts, walking boots can be removed, making hygiene and therapy more manageable during recovery.
