According to our (Global Info Research) latest study, the global Oscilloscope market size was valued at USD 1325.4 million in 2023 and is forecast to a readjusted size of USD 1982.9 million by 2030 with a CAGR of 5.9% during review period.

An oscilloscope is a type of electronic test instrument that allows observation of constantly varying signal voltages, usually as a two-dimensional plot of one or more signals as a function of time. Non-electrical signals (such as sound or vibration) can be converted to voltages and displayed. Oscilloscopes are used to observe the change of an electrical signal over time, such that voltage and time describe a shape which is continuously graphed against a calibrated scale. The observed waveform can be analyzed for such properties as amplitude, frequency, rise time, time interval, distortion and others. Originally, calculation of these values required manually measuring the waveform against the scales built into the screen of the instrument. Modern digital instruments may calculate and display these properties directly.

The major players in global oscilloscope market include Tektronix, Keysight, etc. The top 5 players occupy about 53% shares of the global market. North America and China are main markets, they occupy about 70% of the global market. Hand-held oscilloscope is the main type, with a share about 85%.
