Abstracts

The global Osmium Metal Powder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market for osmium metal powder is relatively niche and specialized, catering to specific industries and applications. Due to its limited supply and high value, osmium metal powder is typically obtained from a select number of suppliers and is considered a rare and valuable material.

Osmium is the densest substance known and the hardest of all platinum group metals (PGMs). It is ten times harder than platinum itself. Osmium also has a higher melting point than the other platinum group metals. In metal form, osmium's brittleness and hardness made it extremely difficult to work with and it is usually produced as a powder. This powder emits osmium tetroxide which is used in the detection of fingerprints and as a forensic stain for DNA samples.

This report studies the global Osmium Metal Powder production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Osmium Metal Powder, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
