According to our (Global Info Research) latest study, the global Ostrich Leather market size was valued at US\$ 50.42 million in 2025 and is forecast to a readjusted size of US\$ 28.06 million by 2032 with a CAGR of -8.0% during review period.

Ostrich leather refers to natural leather material produced by tanning raw hides from farmed African ostriches (*Struthio camelus*), representing a high-end category within the global exotic leather industry. Ostrich farming is distributed across South Africa, Zimbabwe, Kenya, Australia, China, and Europe, with South Africa being the world's largest production and processing hub. The most distinctive feature of ostrich leather is its unique quill follicle pattern—the feather follicles create raised natural bumps (commonly known as "pearls" or "quill marks") after tanning, forming irregularly arranged, three-dimensional patterns that are unique to each hide. Ostrich leather contains natural oils that keep it flexible at temperatures as low as -20°C without cracking or hardening; it is softer than crocodile leather and has tensile strength 3-5 times that of cowhide. Ostrich leather thickness typically ranges from 1.0 to 1.5mm, with different sections classified into large skins (back, suitable for bags and shoe uppers) and small/thin skins (neck and leg areas, as thin as 0.2-0.4mm, ideal for high-end garments). After chrome or vegetable tanning, ostrich leather is used to produce high-end shoes, handbags, belts, wallets, garments, and automotive interiors. Ostrich leather products become shinier with use and offer exceptional durability. Ostrich leather is not subject to CITES controls as all raw materials come from farmed sources, enabling free global trade. Due to ostrich farming scale being far smaller than traditional livestock such as cattle, ostrich leather remains a supply-constrained, premium-priced specialty leather within the global market.

The global ostrich raw hide and skin market reached approximately USD 49 million in

2025, forecast to decline to approximately USD 45 million in 2026, with a CAGR of approximately -8.2% (primarily due to the 30% US tariff on South African imports severely disrupting the global supply chain). Volume: global annual ostrich hide processing estimated at 350,000-400,000 hides. Price tiers by raw hide quality: Grade 1 USD 400-600 per hide; Grade 2 USD 250-400 per hide; Grade 3 USD 150-250 per hide; Grade 4
