According to our (Global Info Research) latest study, the global Otoacoustic Emission Testing (OAE) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The otoacoustic emission test (OAE) measures hair cell function in the inner ear. An emission refers to the sound generated within the normal cochlea of the ear in response to stimulation. The OAE test is noninvasive and requires a small probe to be inserted in the ear. A series of tones or clicking sounds are presented to the patient. The test takes place in a small sound booth, where the patient is required to be still and quiet throughout testing. It takes approximately 30 minutes for the test, after which the audiologist will share your test results with you.

OAE testing is used for a number of reasons, including screening of infants and other special populations.
