The global Outboard Electric Trolling Motors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Outboard electric motor is a kind of propulsion system for boats which uses electric as power. Outboard electric motor, commonly referred to as “trolling motor” or “electric Outboard motor”. They are the most common motorized method of propelling small watercraft. As well as providing propulsion, outboards provide steering control, as they are designed to pivot over their mountings and thus control the direction of thrust. The skeg also acts as a rudder when the engine is not running. Unlike inboard motors, outboard motors can be easily removed for storage or repairs.
