Abstracts

According to our (Global Info Research) latest study, the global Outbound Baggage Handling System market size was valued at US\$ 11730 million in 2025 and is forecast to a readjusted size of US\$ 17332 million by 2032 with a CAGR of 5.9% during review period.

The Outbound Baggage Handling System (BHS) is an automated system used by airports to handle passenger baggage. It consists of conveyor belts, sorting equipment, security screening modules, and an information control system. It is responsible for transporting baggage from check-in counters to security screening points and then sorting it to the correct flight loading points. It solves problems such as low efficiency of manual handling, baggage missorting, and security screening delays, improving airport operational efficiency and passenger experience. The system costs approximately US\$18 million per unit. Upstream components include conveyor belt materials (wear-resistant rubber, steel), motors and drive systems (power 5?50 kW), security screening equipment (CT scanners/X-rays), and information systems (RFID chips, barcode printers). Downstream customers include international airports, regional airports, and transportation hubs. Future trends include intelligentization (AI sorting), digitalization (IoT + big data), environmental protection and energy saving (low-power motors), and high reliability (?99.5% system availability).
