Abstracts

According to our (Global Info Research) latest study, the global Outdoor Gas Stove market size was valued at US\$ 566 million in 2025 and is forecast to a readjusted size of US\$ 812 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global sales volume of outdoor gas stoves reached approximately 10.6 million units, with an average selling price of about US\$51.8 per unit. An outdoor gas stove is a portable combustion appliance powered by butane, propane, isobutane, or blended liquefied gas supplied through replaceable canisters, cassette cartridges, or external LPG cylinders, and is used for boiling water and preparing food in camping, backpacking, mountaineering, overlanding, picnicking, and other outdoor settings. Major product forms include compact burner stoves, integrated cooking systems, cassette tabletop stoves, and basecamp chassis stoves. These products typically incorporate a burner, gas control valve, cookware support, ignition mechanism, and wind protection structure, providing portability, rapid deployment, adjustable heat output, efficient combustion, and reliable cooking capability where fixed kitchen facilities and conventional energy supplies are unavailable.

Market growth is primarily driven by rising participation in camping, backpacking, mountaineering, and vehicle-based outdoor travel, together with increasing demand for lightweight, fast-ignition, stable, and fuel-efficient cooking equipment. The expansion of family camping and premium camping supports demand for two-burner stoves, basecamp chassis stoves, and integrated cooking systems, while ultralight outdoor activities continue to favor compact burner models. Product improvements in wind resistance, cold-weather performance, safety valves, combustion efficiency, and portability are also raising the share of mid-range and premium products. Additional

demand comes from emergency preparedness, disaster-response supplies, and off-grid lifestyles.
