## Abstracts

The global Outdoor High Voltage AC Vacuum Load Switch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High-voltage switchgear is the most important power equipment in the power transmission and distribution system, and power customers require products with high safety and reliability. If product quality is unqualified or defective, it will affect power supply safety and equipment safety, causing serious consequences. Therefore, electric power customers have extremely high requirements for product performance, quality, R&D technology level and application service level. As market competition intensifies and technology replacement cycles shorten, the application of new technologies and the development of new products have become the core competitiveness of manufacturing companies in this industry. Only by maintaining continuous innovation capabilities and continuously improving technological levels can enterprises occupy a place in the fiercely competitive market.

The vacuum load switch is suitable for use in three-phase AC high-voltage power systems, as a set of power distribution equipment, ring network switch cabinets, combined substations, etc. It has the ability to break rated current, overload current and prevent equipment from running due to phase loss. The switch It has an obviously visible isolation fracture, is equipped with a grounding switch with closing ability and an electric spring mechanism, and has remote control capability.
