Abstracts

According to our (Global Info Research) latest study, the global Outdoor Reverse Vending Machines for Bottle and Can Recycling market size was valued at US\$ 875 million in 2025 and is forecast to a readjusted size of US\$ 1293 million by 2032 with a CAGR of 5.7% during review period.

Outdoor Reverse Vending Machines (RVMs) for Bottle and Can Recycling are automated collection systems designed to accept used beverage containers, such as plastic bottles, aluminum cans, and glass bottles, from consumers for recycling. Unlike traditional vending machines that dispense products, reverse vending machines receive empty containers, identify and verify eligible items through barcode scanning, shape recognition, or AI-based vision systems, and provide rewards such as deposit refunds, coupons, loyalty points, or digital credits. These systems play a critical role in deposit return schemes (DRS), circular economy initiatives, and sustainable waste management by improving collection rates and enabling high-quality material recovery for bottle-to-bottle and can-to-can recycling applications.

In 2025, global Outdoor Reverse Vending Machines for Bottle and Can Recycling production reached approximately 10000 units, with an average global market price of around US\$ 85,000 per unit. The gross profit margin of major companies in the industry is between 35% ? 55%.

The market for Outdoor Reverse Vending Machines (RVMs) for Bottle and Can Recycling is experiencing steady growth, driven by the global expansion of deposit return schemes (DRS), increasing recycling targets, and government initiatives promoting circular economy practices. Compared with indoor models, outdoor RVMs

are designed to operate in public environments such as transit stations, parks, campuses, shopping centers, and municipal recycling points, requiring enhanced durability, weather resistance, vandalism protection, and remote monitoring capabilities. Growing adoption of IoT connectivity, AI-based container recognition, and digital reward systems is improving operational efficiency and user engagement. Europe remains the largest market due to mature DRS programs, while North America and Asia-Pacific are emerging growth regions as governments and beverage producers invest in higher collection rates and closed-loop recycling infrastructure. Long-term demand is expected to benefit from sustainability commitments by beverage brands and stricter recycled-content regulations for packaging.
