The global Outdoor Wireless AP market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An outdoor wireless AP is a telecommunications infrastructure device that is designed to provide wireless coverage in outdoor areas. The AP connects to a mobile network operator's core network and provides wireless access to mobile devices such as smartphones, tablets, and laptops.

Outdoor wireless base stations are typically used in locations such as highways, remote areas, parks, stadiums, and other outdoor public spaces where users need to have access to wireless services. These base stations are designed to withstand harsh environmental conditions and can operate in extreme temperatures, high winds, and other adverse weather conditions.

Outdoor wireless base stations typically consist of a mast, an antenna, a radio transceiver, and other necessary components such as power supplies and cooling systems. The mast provides the height needed to ensure that the wireless signal can be transmitted over a wide area, while the antenna is used to transmit and receive the wireless signal. The radio transceiver is used to modulate and demodulate the signals sent and received by the antenna.

Outdoor wireless base stations are an essential component of mobile networks, as they allow mobile network operators to provide wireless coverage to users in outdoor areas, which would otherwise be difficult or impossible to cover.

This report studies the global Outdoor Wireless AP production, demand, key
