## Abstracts

The global Overall Turbochargers market size is expected to reach \$ 54820 million by 2032, rising at a market growth of 10.7% CAGR during the forecast period (2026-2032).

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. The turbocharger has four main components, the turbine, the compressor, the control system and the bearing system.

Asia-Pacific is the largest region of Overall Turbochargers, with a market share about 45%. It was followed by Europe with 40%. Honeywell, BorgWarner, MHI, IHI and Cummins are the top 5 manufacturers of industry, and they had about 75% combined market share.
