Abstracts

According to our (Global Info Research) latest study, the global Overhead Camshaft Engines market size was valued at US\$ 234611 million in 2025 and is forecast to a readjusted size of US\$ 289282 million by 2032 with a CAGR of 3.0% during review period.

In 2025, global Overhead Camshaft Engine output reached about 120 million units and global capacity of around 140 million units. The average price is about USD 1,900 per unit, with gross margins near 19%. Overhead Camshaft (OHC) Engines are internal combustion engines in which the camshaft is positioned in the cylinder head directly above the combustion chamber and valves, rather than inside the engine block as in traditional overhead valve (OHV) engines. The camshaft controls the opening and closing of intake and exhaust valves through direct actuation or via rocker arms, enabling more precise valve timing, higher engine speeds, improved fuel efficiency, lower emissions, and enhanced power output. OHC engines are commonly categorized into Single Overhead Camshaft (SOHC) and Double Overhead Camshaft (DOHC) configurations and are widely used in passenger vehicles, motorcycles, commercial vehicles, and high-performance engines. The supply chain begins with upstream suppliers of raw materials and components such as cast iron, aluminum alloys, steel forgings, camshafts, cylinder heads, valves, valve springs, timing chains, timing belts, cam phasers, bearings, sensors, and engine control units (ECUs). Midstream participants include engine component manufacturers and engine OEMs that design, machine, assemble, and test complete OHC engine systems. Downstream customers include automotive manufacturers, motorcycle producers, commercial vehicle OEMs, industrial equipment manufacturers, marine engine builders, and the aftermarket sector for engine replacement parts, maintenance, and performance upgrades.
