The global Overhead Line Remote Fault Indicator market size is expected to reach \$ 180.2 million by 2029, rising at a market growth of 5.6% CAGR during the forecast period (2023-2029).

Overhead Line Fault Circuit Indicators aid in locating faulted circuits and equipment on overhead distribution systems. Indicators are self-powered and consist of a solid state current sensor connected to a faulted circuit display. Designs incorporate advanced circuit logic, monitoring system protection operation and prevent indicator tripping unless an overcurrent condition is followed by a loss of system voltage. Trip and reset operations are automatic and the same indicator may be used for 5KV thru 35KV applications.
