Abstracts

The global Overload Couplings market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Torque limiters (overload couplings) are vital components in the drive train. They help to avoid longer downtimes and expensive repairs along with the resulting costs. In case of overload resulting from a breakdown in the operation of the plant, the torque-limiting systems (torque limiters) uncouple driving and driven side while protecting the drive train from larger damages. That is why they are mostly referred to as safety couplings.

This report studies the global Overload Couplings production, demand, key manufacturers, and key regions.
