Abstracts

The state stipulates that the power supply error of single-phase 220V shall not be greater than 10% of plus or minus 220V. In single-phase 220V electricity, 220V suddenly rises to the ultra-high voltage of 380V or 440V, which is called overvoltage. The device that can intelligently and automatically cut off the power supply quickly when the grid voltage has a sudden change in overvoltage is called an overvoltage protector.
