Abstracts

The global Ovotransferrin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ovotransferrin is a glycoprotein of egg white albumen. It has a molecular weight of 76,000 daltons and contains about 700 amino acids. Ovotransferrin makes up approximately 13% of egg albumen (in contrast to ovalbumin, which comprises 54%). As a member of the transferrin and metalloproteinase family, ovotransferrin has been found to possess antibacterial and antioxidant and immunomodulatory properties, arising primarily through its iron (Fe³⁺) binding capacity by locking away a key biochemical component necessary for micro-organismal survival. Bacteria starved of iron are rendered incapable of moving, making ovotransferrin a potent bacteriostatic.

This report studies the global Ovotransferrin production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Ovotransferrin, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
