## Abstracts

According to our (Global Info Research) latest study, the global Oxidative Stress Assay market size was valued at USD 734.7 million in 2023 and is forecast to a readjusted size of USD 1222.2 million by 2030 with a CAGR of 7.5% during review period.

Oxidativestress isinitiated by the presence of a reactive oxygen species (ROS) which the cell fails to counterbalance and then it damages the biomolecules such as DNA, RNA, lipids and proteins. Oxidative stress has been associated with the aging process as well as various other disease states.It is an ongoingprocess between highly reactive radicals and the body system designed for mitigating their effects.Few diseases occur from a failure to counter these effects. Oxidative stress causes many pathophysiological disorders in the body and some of these include neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease, cancers, fragile X syndrome, chronic fatigue syndrome, atherosclerosis, heart and blood vessel disorders, cardiovascular disease, inflammatory diseases and others.Oxidative stress assay is a method for detecting and screening markers of oxidative stress in cells. It is a great tool for analyzing and evaluating the capacity to counter the oxidative stress as it provides relevant biological information.
