Oxide polishing suspension is a type of polishing solution used in materials science, engineering, and manufacturing for the final polishing of various materials. It is typically used to remove surface imperfections and to achieve a high level of surface finish on materials such as metals, ceramics, semiconductors, and other advanced materials. The suspension is a mixture of abrasive particles and a liquid carrier. The abrasive particles are suspended in the liquid and are used to physically remove surface material from the sample being polished. Oxide polishing suspension is commonly used in the manufacturing of precision components for various industries, including automotive, medical, aerospace and electronics.
