## Abstracts

According to our (Global Info Research) latest study, the global Oxidising Biocides market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Oxidising Biocides are a class of chemical substances with oxidizing effects that can kill or inhibit the growth of microorganisms by releasing oxidants. They destroy the cell structure of microorganisms by producing free radicals or other oxidizing substances, thereby achieving the purpose of killing microorganisms. When using oxidising Biocides, it is necessary to pay attention to their impact on the environment and the possible corrosion to materials. At the same time, long-term use of the same oxidizing fungicide may cause microorganisms to develop resistance, so it is necessary to reasonably rotate the use of different types of fungicides.
