The global Oximeter for Home Monitoring market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

An oximeter is a portable device that measures blood oxygen levels by looking at how well the blood absorbs light. The device works by using two beams of light (one red light and one infrared light) to penetrate the finger. The absorption of these lights differs significantly between oxygenated and deoxygenated blood. Blood full of oxygen absorbs more infrared light, allowing more red light to pass through. Blood without enough oxygen absorbs more red light, allowing more infrared light to pass through. The test is fast, simple and non-invasive (no needles required).
