According to our (Global Info Research) latest study, the global Oxy-fuel Cutting Torches market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Oxy-fuel cutting torches are tools used in the process of oxy-fuel cutting, a thermal cutting process that uses a combination of fuel gases and oxygen to melt and remove metal. This cutting method is widely used in various industries for cutting or gouging metals, especially ferrous metals like steel.

The cutting torch is the handheld tool that combines the oxygen and fuel gas in the correct proportions and directs the flame onto the workpiece. It has a handle for the operator, a mixing chamber where the oxygen and fuel gas combine, and a nozzle where the flame is emitted.

Oxy-fuel cutting requires a high-purity oxygen source, often supplied from compressed oxygen cylinders. Oxygen is the oxidizing agent in the process and supports the combustion of the fuel gas. Common fuel gases used in oxy-fuel cutting include acetylene, propane, propylene, or natural gas. Acetylene is frequently used because it provides a high flame temperature.

Oxy-fuel cutting is versatile and can be used for both straight-line and shape cutting. It is commonly employed in industries such as metal fabrication, construction, shipbuilding, and automotive repair. Oxy-fuel cutting torches are valued for their simplicity, portability, and cost-effectiveness in cutting thick metals.
