According to our (Global Info Research) latest study, the global Oxy-Fuel Gas Cutting Torches market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Oxy-fuel gas cutting torches are tools used in metal cutting processes where a mixture of oxygen and a fuel gas, such as acetylene, is combusted to generate a high-temperature flame. The intense heat produced by the flame melts the metal at the cutting point, while a stream of high-pressure oxygen blows away the molten metal, creating a cut. Oxy-fuel cutting is commonly employed in various industries for tasks such as cutting and shaping metals in fabrication, construction, and maintenance applications. The torches come in various designs and configurations, allowing for precise and efficient cutting of different thicknesses and types of metals.
