## Abstracts

The busbar refers to the oxygen supply equipment composed of an appropriate number of oxygen cylinders, pipes, valves and instruments. When using oxygen cylinder groups to supply oxygen to form a busbar, two (or more) groups of gas cylinders must be set up to supply oxygen alternately, using automatic or manual switching. At the same time, in order to ensure the safety of the system, a filter with a filter hole smaller than 25  $\mu$ m should be installed before the pressure reducer of the oxygen manifold; the total number of gas cylinders in the manifold exhaust cylinder group should not exceed 20 cylinders. After use, the empty oxygen bottle must have a residual pressure of more than 0.1MPa.
