According to our (Global Info Research) latest study, the global Oxygen market size was valued at USD 46240 million in 2023 and is forecast to a readjusted size of USD 60150 million by 2030 with a CAGR of 3.8% during review period.

Oxygen is a chemical element with symbol O and atomic number 8. It is a member of the chalcogen group on the periodic table and is a highly reactive nonmetal and oxidizing agent that readily forms oxides with most elements as well as other compounds. By mass, oxygen is the third-most abundant element in the universe, after hydrogen and helium. At standard temperature and pressure, two atoms of the element bind to form dioxygen, a colorless and odorless diatomic gas with the formula O₂. This is an important part of the atmosphere and diatomic oxygen gas constitutes 20.8% of the Earth's atmosphere. Additionally, as oxides the element also makes up almost half of the Earth's crust.

Oxygen was discovered independently by Carl Wilhelm Scheele, in Uppsala, in 1773 or earlier, and Joseph Priestley in Wiltshire, in 1774, but Priestley is often given priority because his work was published first. The name oxygen was coined in 1777 by Antoine Lavoisier, whose experiments with oxygen helped to discredit the then-popular phlogiston theory of combustion and corrosion. Its name derives from the Greek roots *oxys*, 'acid', literally 'sharp', referring to the sour taste of acids and *-genes*, 'producer', literally 'begetter', because at the time of naming, it was mistakenly thought that all acids required oxygen in their composition.

Global Oxygen key players include Linde Group, AirLiquide, Praxair, Air Product, etc. Global top four manufacturers hold a share over 55%.

North America is the largest market, with a share about 25%, followed by China, and Europe, both have a share about 40 percent.
