According to our (Global Info Research) latest study, the global Oxygen Sensor Recovery market size was valued at USD 113.2 million in 2022 and is forecast to a readjusted size of USD 138 million by 2029 with a CAGR of 2.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

One trend in oxygen sensor recovery is the development of more efficient and cost-effective recovery methods. This includes the use of advanced technologies, such as plasma processing and chemical treatments, to extract the precious metals from the sensors. These methods can help to increase the yield of precious metals and reduce processing times, resulting in more efficient and sustainable recovery processes.

Another trend is the growing demand for recovered precious metals, such as platinum, rhodium, and palladium, which are used in a variety of industries, including automotive, electronics, and jewelry. As the demand for these metals continues to rise, the importance of recovering them from used oxygen sensors and other sources becomes increasingly significant.
