## Abstracts

The global Oxygen Sensor Recovery market size is expected to reach \$ 138 million by 2029, rising at a market growth of 2.9% CAGR during the forecast period (2023-2029).

One trend in oxygen sensor recovery is the development of more efficient and cost-effective recovery methods. This includes the use of advanced technologies, such as plasma processing and chemical treatments, to extract the precious metals from the sensors. These methods can help to increase the yield of precious metals and reduce processing times, resulting in more efficient and sustainable recovery processes.

Another trend is the growing demand for recovered precious metals, such as platinum, rhodium, and palladium, which are used in a variety of industries, including automotive, electronics, and jewelry. As the demand for these metals continues to rise, the importance of recovering them from used oxygen sensors and other sources becomes increasingly significant.

This report studies the global Oxygen Sensor Recovery demand, key companies, and key regions.
