According to our (Global Info Research) latest study, the global Oxymetry market size was valued at USD 2101.1 million in 2023 and is forecast to a readjusted size of USD 3028 million by 2030 with a CAGR of 5.4% during review period.

A pulse oximeter is a medical device that indirectly monitors the oxygen saturation of a patient's blood (as opposed to measuring oxygen saturation directly through a blood sample) and changes in blood volume in the skin, producing a photoplethysmogram that may be further processed into other measurements.

With the increasing prevalence of respiratory diseases and the growing importance of monitoring oxygen saturation levels, the demand for oxymeters is on the rise. Factors such as the COVID-19 pandemic, aging population, and the need for portable and user-friendly devices contribute to market expansion. Key players in the market are investing in research and development to introduce innovative features and improve accuracy in oxymeters.
