Veterinary oxytocin, also known as oxytocin, is a peptide hormone with a chemical formula of  $C_{45}H_{87}N_{13}O_{17}S_2$ . It is a white amorphous or crystalline powder, soluble in water and its aqueous solution is acidic. As a reproductive hormone, it is synthesized by the hypothalamus and released by the posterior pituitary gland. It has a significant contraction effect on the uterus, especially sensitive to the pregnant uterus. It can directly excite the uterine smooth muscle, strengthen the contraction force, increase the frequency and tension, and relax the cervical smooth muscle, which is conducive to the delivery of the fetus. In veterinary clinics, it is mainly used for the treatment of obstetric diseases such as inducing labor in female animals, preventing and treating postpartum uterine bleeding, retaining the placenta and incomplete uterine recovery, and can also promote breast milk discharge during lactation.
