According to our (Global Info Research) latest study, the global Oyster Mushroom Extract market size was valued at US\$ 412 million in 2025 and is forecast to a readjusted size of US\$ 555 million by 2032 with a CAGR of 4.4% during review period.

Oyster mushroom extract is a concentrated natural active ingredient obtained through modern extraction processes from the fruiting bodies of the edible mushroom oyster mushroom. It provides unique fungal polysaccharides (such as beta-glucan), proteins, polyphenols, and ergothioneine, which have been proven to possess excellent immunomodulatory, antioxidant, and anti-inflammatory activities. It addresses the demand in the health supplement and functional food industries for safe and effective natural immune enhancers and antioxidants, while also providing cosmetics with innovative natural ingredients to combat environmental stress and brighten skin tone. The upstream supply chain mainly includes the standardized factory cultivation, harvesting, cleaning, drying, and pulverizing of oyster mushrooms, with the core focus on ensuring pollution-free raw materials, stable active ingredients, and large-scale supply through controlled environments. The downstream supply chain primarily covers health supplement companies (producing immune-boosting dietary supplements), functional food and beverage manufacturers (producing beverages that enhance the body's antioxidant capacity), cosmetic companies (producing anti-aging and skin-brightening skincare products), and some animal health sectors. In 2025, the production of oyster mushroom extract is expected to reach approximately 5,000 tons, with an average price of approximately US\$80 per kilogram, a gross profit margin of approximately 30%, and a single production line capacity of approximately 150 tons per year.
