## Abstracts

Ozone Air Purifiers are one of the most common ways to quickly remove airborne contaminants and odors from homes, offices, and even cars. These machines produce ozone, a molecule that can react with certain pollutants to alter their chemical composition to remove mold, bacteria, or odor. While this can result in dangerous indoor air quality, ozone has been linked to decreases in lung function and increased risks of throat irritation, coughing, chest pain, and lung tissue inflammation.

According to our (Global Info Research) latest study, the global Ozone Air Purifiers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
