According to our (Global Info Research) latest study, the global Ozone Decomposer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An ozone decomposer is a device designed to break down ozone into less harmful substances. Ozone, while beneficial in the upper atmosphere for blocking ultraviolet radiation, can be harmful to humans and materials at ground level. High concentrations of ozone can cause respiratory issues and degrade organic materials over time.

Ozone decomposers are crucial in environments where ozone is generated or used, including water treatment facilities, air purification systems, and industries utilizing ozone for sterilization purposes. They ensure that ozone levels remain within safe limits to protect human health and material integrity.
