The global Ozone Free Mercury-Xenon Arc Lamp market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An ozone-free mercury-xenon arc lamp is a type of light source that combines mercury and xenon gases to produce intense light in a specific wavelength range. This lamp is designed to emit light without generating ozone as a byproduct.

Ozone-free mercury-xenon arc lamps are often used in applications requiring UV or visible light, such as spectroscopy, microscopy, fluorescence imaging, and photochemical reactions. These lamps are preferred in situations where the generation of ozone is undesirable, such as in research labs, medical facilities, and indoor environments.

The benefits of using ozone-free mercury-xenon arc lamps include their high intensity, broad spectrum, and long lifespan. They can provide a stable and consistent light source for various scientific and industrial applications.
