Abstracts

According to our (Global Info Research) latest study, the global Ozone Gas Decomposers market size was valued at US\$ 203 million in 2024 and is forecast to a readjusted size of USD 328 million by 2031 with a CAGR of 7.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An ozone gas decomposer is a device specifically designed to break down excess ozone gas in the air. In ozone generators or ozone application systems, residual ozone can remain in the gas stream after usage, and excess ozone can pose risks to the environment and human health. The ozone gas decomposer safely and effectively decomposes the excess ozone in the air, converting it into oxygen, thereby preventing ozone leakage and environmental contamination.
