Abstracts

Ozone generators work by combining oxygen (O₂) with energy to produce ozone (O₃). When the oxygen molecules are exposed to energy, the two atoms are broken apart. The single oxygen atoms quickly bond in groups of three to form ozone.

Scope of the Report:

This report focuses on the Ozone Generator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. For industry structure analysis, the Ozone Generator industry is not concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 34.59 % of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Ozone Generator industry.

China occupied 29.16% of the production market in 2017. It is followed by Europe and North America, which respectively account for around 26.18% and 22.54% of the global total industry. Other countries have a smaller amount of production. Geographically, China was the largest consumption market in the world, which took about 25.52% of the global consumption volume in 2017.

For price trend analysis, a key variable in the performance of Ozone Generator producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

The worldwide market for Ozone Generator is expected to grow at a CAGR of roughly 1.6% over the next five years, will reach 590 million US\$ in 2023, from 530 million US\$ in 2017, according to a new GIR (Global Info Research) study.
