According to our (Global Info Research) latest study, the global Ozone Generator Module market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Ozone Generator Module is a device that generates ozone gas, which is a powerful oxidant and disinfectant. The module typically consists of a power supply, a high-voltage transformer, and a corona discharge cell. When the high voltage is applied to the corona discharge cell, it generates ozone gas by splitting oxygen molecules into individual atoms, which then react with other oxygen molecules to form ozone.

The upstream industry chain of Ozone Generator Module includes the production of raw materials such as oxygen and electricity. The downstream industry chain includes applications in water treatment, air purification, food processing, and medical sterilization. The demand for Ozone Generator Modules is driven by the increasing need for clean water and air, as well as the growing awareness of the health benefits of ozone therapy.
