Abstracts

The ozone micro-nanobubble generator is a device that can generate extremely fine bubbles with a diameter of less than 50 microns. Its core technologies and features include micro-nano generation devices, ozone generating devices, oxygen generating devices, mixing devices, etc., which can efficiently generate ozonemicro-nanobubble water. These bubbles rise slowly in water, have a long residence time, and have high dissolution efficiency. They are self-oxygenating, negatively charged, and rich in strong oxidizing free radicals, making them useful in water treatment, wastewater treatment, food processing, and agriculture. It has broad application prospects in various fields such as medicine and pharmaceuticals.

According to our (Global Info Research) latest study, the global Ozone Micro-Nanobubble Generator market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

As people's understanding of the characteristics of ozone micro-nanobubbles deepens, their application fields will be further expanded. In addition to the existing fields of water treatment, wastewater treatment, food processing, agriculture, pharmaceuticals, etc., it may also be used in more new fields, such as environmental restoration, energy utilization, etc.
