## Abstracts

According to our (Global Info Research) latest study, the global Ozone Water Decomposers market size was valued at US\$ 70.6 million in 2024 and is forecast to a readjusted size of USD 99 million by 2031 with a CAGR of 5.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Ozone water decomposers are devices used to treat ozonated water by chemically or physically decomposing the ozone into oxygen and water. Ozone has strong oxidizing properties in water, which allows it to remove harmful substances, bacteria, and viruses. However, ozone itself can be hazardous to the environment and human health, so decomposers are used to reduce ozone concentrations to safe levels.
