Abstracts

The global Packaging Ultrasonic Welder market size is expected to reach \$ 292.9 million by 2029, rising at a market growth of 6.1% CAGR during the forecast period (2023-2029).

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts.

This report studies the global Packaging Ultrasonic Welder production, demand, key manufacturers, and key regions.
