Packed Column Scrubber is an air pollution control device designed to remove contaminants from gas streams through a process known as absorption. The system typically consists of a vertical column filled with packing material, such as ceramic or plastic rings, that creates a large surface area for the gas and liquid to interact. As the contaminated gas enters from the bottom and rises through the packing, a liquid (often water or a chemical solution) is introduced from the top, flowing down. The pollutants in the gas dissolve into or chemically react with the liquid, effectively cleaning the gas before it is discharged. These scrubbers are commonly used in industries like chemical manufacturing, power generation, and waste treatment to remove acidic gases, volatile organic compounds (VOCs), and other pollutants.
