## Abstracts

The global Pad Printing Inks market size is expected to reach \$ 314 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Pad Printing Ink is a type of pad printing supplies. High brilliance and outstanding opacity are a matter of course with all pad printing inks. In addition to 1- and 2-component solvent inks, a universally applicable UV system completes the range.

In 2024, global Pad Printing Inks production reached approximately 3119 tons, with an average global market price of around US\$ 63.9 per kg.

Pad printing opens up possibilities that are hard to realize through conventional printing processes. It is probably the most adaptable of all printing processes, standing out due to its large variety of substrates and high flexibility. It can be printed on various materials and surface structures - and on almost any shape.

Pad printing inks are mainly classified into the following types: Solvent-based and UV Curing. Solvent-based includes 1C (1 Component), 2C and 1or&2C product, and 1C takes about 30% of the total solvent-based product. Solvent-based is the most widely used type which takes up about 91.3% of the total revenue market. But UV Curing mark a fast growth rate.

Pad printing inks have wide range of applications, such as electronics, consumer goods, automotive, medical, etc. And consumer goods industry was the most widely used area which took up about 48.9% of the global total.

Coates Screen, Marabu, Printcolor, Encres DUBUIT, JUJO, etc. are the key suppliers in

the global Pad printing inks market.

Pad printing ink is a key type of pad printing supplies, so many pad printing machines producers produce inks or distributed inks at the same time, this is a unique characteristic in this industry.
