According to our (Global Info Research) latest study, the global PAG Synthetic Lubricants market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Synthetic oil is a lubricant consisting of chemical compounds that are artificially made. Synthetic lubricants can be manufactured using chemically modified petroleum components rather than whole crude oil, but can also be synthesized from other raw materials. One of the most versatile types of synthetics is polyalkylene glycol (PAG) lubricants. PAGs are generally known as compressor lubricants, and their use in industry has increased since the 1980s. Increasing performance standards in the automotive and industrial markets peg these sectors as areas that show promise for growth.

Synthetic lubricants provide numerous benefits when used for automotive applications such as excellent thermal stability and low friction. Rising awareness regarding the advantages of the product, as opposed to its mineral counterparts, will augment industry growth over the forecast period. A major application of synthetic lubricants is their use as heat transfer fluids in heavy machinery and heat exchangers. Rising industrial sector in Asia Pacific countries will propel product demand over the forecast period.
