## Abstracts

The global Painted Steel and Painted Glass market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Painted steel is exactly that: a layer of paint is applied to steel, creating a protective layer from the elements. The process of applying paint to steel involves: Cleaning the steel using a technique called sandblasting. This also roughens up the surface, allowing the paint to bond better. Back painted glass is a unique use of glass that has been growing in popularity in recent years. It is essentially exactly what it sounds like- glass that has been painted on the back side. That way, from the front side, the glass is no longer translucent, but instead a solid colour. In a double-glazed unit the paint would be applied to surface four. The applications for back painted glass vary widely and it is commonly used in both residential and commercial buildings.

This report studies the global Painted Steel and Painted Glass production, demand, key manufacturers, and key regions.
