Chemical-grade palladium on alumina catalyst (Pd/Al₂O₃) is a highly efficient solid catalyst consisting of palladium metal supported on alumina. It is primarily used to facilitate selective hydrogenation of olefins, hydrogenation of aromatic rings, and hydrogenation of various functional groups, playing a critical role in polymer-grade feedstock purification, fine chemical intermediate synthesis, and related environmental applications. The catalyst features high activity, excellent selectivity, and strong stability, and is applicable in industrial hydrogenation reactions, exhaust gas treatment, and the catalytic oxidation of volatile organic compounds (VOCs).
